Machinery and plants for materials handling

Our hallmark – tough-minded quality

High-performance mechanical work is required by conveyor machines and plants. They must be robust and tough without renouncing flexibility and precise functional adjustment.

Each conveyor technology demands individual technical solutions for the most different applications and requests.

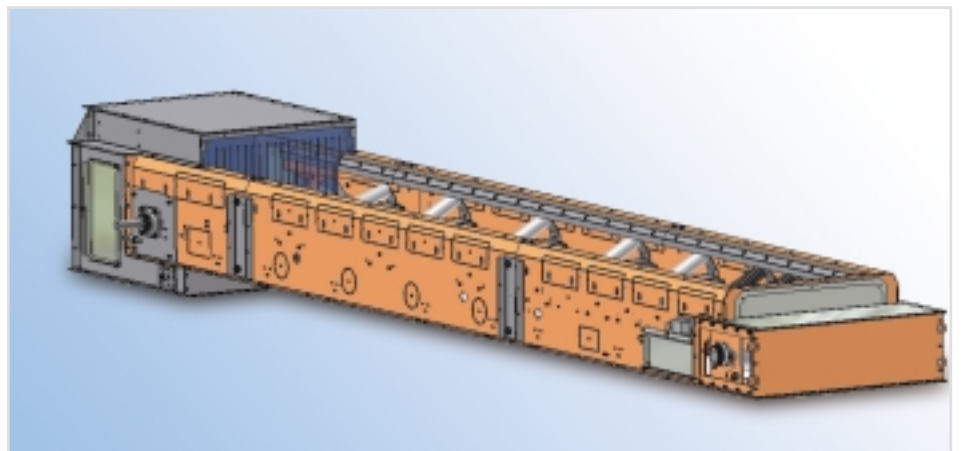

Thus intensive consultation is in the first place for Westeria as important element of our performance. We are present from first conversation to production up to erection, employee training and

long-term maintenance service.

We are able to realize technical challenges with flexibility and quickly due to our human resources and latest equipment.

The entire production process is subject to quality management system DIN ISO 9000/9001

Whether individual components or complete conveyor lines, whether flat belt, chain link, hinged slat conveyor or troughed chain conveyor, whether heavy-duty roller conveyor or reclaiming belt conveyor with slewing travel gear – we supply quality and individuality.

After successful final inspection at factory and erection on-site our specialists will be at your disposal as well after commissioning.

Windsifters, the patented solution for processing of building rubbish, residual waste, compost.

Our windsifters are separating reliably light material like paper, plastic, wood.

Hundreds of this well-engineered technology are established in most different applications.

High output up to 200 m³/h and flexible adjustment due to individual requirements are the reason for economic convenience of our windsifters.

Advantages by compact construction and adapted peripheral equipment. Different versions are available for stationary and mobile operation.

Planning and layout by customized requirements.
